/note="Vector: pBluescript II SK.; Site_I: EcoRI; Site_2:
XhoI; This library, constructed by John Davies and Jeffrey
McDermott, combines cDNAs from Cc-1690 cells grown to
mid-log phase in TAPP (acetate-containing) medium in the
light, TAPP medium in the dark, HS (minimal) medium in
ambient levels of Co2 and HS medium bubbled with 5% CO2.
PolyA mRNA was purified from each sample, pooled and cDNA
synthesized. The cDNA was directionally cloned into lambda
ZAP II (Stratagene) in the EcoRI (5') and XhoI (3') sites,
pBluescript II SK- plasmids were excised from the lambda
ZAP clones by superinfection with Exhssist (Stratagene)
phage. The library was normalized using method 4 described
in Bonaldo et al (1996) genome Research 6: 791-806."

Ouality coverage: 8.91 in 020 bases; sum-of-contigs estimation
VOTE: This is a 'working draft' sequence. It currently
consists of 21 contigs. Gaps between the contigs
are represented as runs of N. The order of the pieces
is believed to be correct as given, however the sizes
of the gaps between them are based on estimates that have
provided by the submittor.
This sequence will be replaced
by the finished sequence as soon as it is available and
the accession number will be preserved.

* NOTE: This is a 'working draft' sequence. It currently
* consists of 7 contigs. Gaps between the contigs
* are represented as runs of N. The order of the pieces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submittor.
* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.
* 2990 3079: gap of unknown length
* 34577 34576: contig of 24586 bp in length

Quality coverage: 6.56 in Q20 bases; sum-of-contigs estimation.
* NOTE: This is a 'working draft' sequence. It currently
consists of locontigs. Gaps between the contigs
* are represented as runs of N. The order of the pieces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submittor.
* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.

* 1 86914: contigs G 86914 bp in length.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Unifect Submission

Submitted (14-JUN-2001) Sanger Centre, Hinxton, Cambridgeshire,
CB10 1SA, UK. E-mail enquiries: hunguery@sanger.ac.uk Clone
requests: clonerequest@sanger.ac.uk

On Jan 23, 2001 this sequence version replaced gi:6249356.

During sequence assembly data is compared from overlapping clones,
where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.

The following abbreviations are used to associate primary accession
numbers given in the feature table with their source databases:
Em: EMBL: Sw. SMISSPROT: Tr:, TREMBL: WP:, WORMPEP: Information
on the WORMPEP database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
was generated from part of bacterial clone contigs of human
chromosome 20, constructed by the Sanger Centre Chromosome 20
RAPI-269MIS is from the library RPCI-1 constructed by the group of
Pieter de Jong. For further details see

                                                                                                                                                                                                                                                                                                                                            ÷
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This sequence is the entire insert of clone RPI-269M15 The true lift end of clone RP5-112PP14 is at 84910 in this sequence. The true right end of clone RPI-151AI1 is at 16712 in this sequence. The true right end of clone RPII-151AI1 is at 16712 in this sequence. The regions were either double-stranded or sequenced with an alternate regions were either double-stranded or sequenced with an alternate of themistry or covered by high quality data of i.e., phred quality > 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Homo sapiens

* consists of 29 contigs. The true order of the pieces
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

Vector: pBS15SF7 | Primer A : TCATGCATTACCCACCAGA; Primer B :
AAGGAATGGAAAGAGGAGAAGG; amplimer size : 145 bp) was mapped to
chromosome 20 using Radiation Hybrid panel Genebridge 4 (GB4).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   /protein_id="AaF04623.1"

The present invention relates to single exon nucleic \mathscr{A}cid probes (SENP). The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence encodes a transferase polypeptide, designated HUTRAN-2. The HUTRAN cDNA sequence is derived from Incyte clone 2150892. The sequence is obtained from the partial sequences AA246032-38. The polypeptide is a kynurenine/alpha-aminoadipate aminotransferase. The HUTRAN polypeptides, polynucleotides, agonists, antagonists, and antibodies can be used to diagnose, treat or prevent autoimmune/ inflammatory disease (e.g. ADDS, adult respiratory distress syndrome, allergies, asthma, atherosclerosis, autoimmune thyroiditis, bronchitis, crohn's disease, diabetes mellitus, gout, Grave's disease, osteoarthritis, osteoporosis, pancreatis, psoriasis, rheumatoid arthritis, infections, trauma, neurological disorders (e.g. epilepsy, ischemic cerebrovascular disease, stroke, Alzheimer's disease, picks disease, Huntingdon's disease, dementia, parkinson's disease, prion diseases, central nervous system developmental disorders, prion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       .;

The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity such as Immune system suppression, Activity, Chemotactic/chemokinetic activity, haemostatic and thrombolyric activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; primer; detection; diagnosis; antisense therapy; gene therapy; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Note: The sequence data for this patent did not form part of the printed

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ò
The present invention describes primer sets for synthesising 5602

(a) an oligo-dr primer and an oligonucleotide complementary

comprises: (a) an oligo-dr primer and an oligonucleotide complementary

to the complementary strand of a polynucleotide which comprises one of

the 5602 nucleotide sequences defined in the specification, where the

oligonucleotide comprising a sequence complementary to the

complementary strand of a polynucleotide which comprises a 5'-end

sequence and an oligonucleotide comprising a sequence complementary to the

complementary strand of a polynucleotide which comprises a 5'-end

sequence and an oligonucleotide comprising a sequence complementary to a

polynucleotide which comprises a 3'-end sequence, where the

coligonucleotide comprises at least 15 nucleotides and the combination of

the 5'-end sequences'3'-end sequence is selected from those defined in

the specification. The primer sets can be used in antisense therapy and

in gene therapy. The primers are useful for synthesising polynucleotides,

particularly full-length cohAs. The primers are also useful for the

cohAs easily without any specialised methods. AAH03166 to AAH18638 and

AAB95893 represent human amino acid sequences; and AAH18632
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human: nootropic; immunosuppressant; cytostatic; gene therapy; cancer; peripheral nervous system; neuropathy; central nervous system; CNS;

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM3642-AAM42213) with noctropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Note: The sequence data for this patent did not form part of the printed

                                                                                                                                                                                                                                                                                                                                                                 Sequences AAX83201-X83285 and AAX83331-X83415 represent novel breast cancer tumour specific clones which are expressed from a genomic region containing a human endogenous retrovirus (AAX83330). Detection of the clone sequences allows determination of the presence of breast cancer in a mammal. Progression of breast cancer can be monitored by detecting the level of clone expression. Polypeptides encoded by the clones can be used in vaccines to inhibit or prevent breast cancer.

The present sequence is given in a specification relating to compositions and methods for the treatment and diagnosis of breast, cancer. Nucleotide sequences that are preferentially expressed in breast tumour tissue, and the polypeptides encoded by such nucleotide sequences, are used in
                                                                                                                                                                                                                                                 AAV68800 to AAV68998 represent nucleotide sequences which encode human breast tumour specific polypeptides. Detection or measurement of human breast tumour specific polypeptides and nucleotide sequences, or the corresponding RNA in a sample, is used for diagnosis and monitoring of breast cancer. Human breast tumour specific polypeptides and nucleotide sequences, and the vectors containing the DNAs, are also useful in vaccines for inhibiting development (for prevention or therapy) of breast cancer. The polypeptides may also be used to raise monoclonal antibodies, used as immunoassay reagents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            An isolated polypeptide comprising an immunogenic portion of a breast tumor protein used for inhibiting the development of cancer, especially breast cancer, and monitoring cancer progression in a patient -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
New DNA sequences isolated from endogenous human retroviral element - and related vectors, transformed cells, proteins and antibodies, useful for diagnosis, treatment and prevention of breast cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Dillon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  0;

                                                                                                                                                                                                                                                                      0;
compositions and vaccines to inhibit the development of cancer, especially breast cancer. The progression of a cancer may be monitored by carrying out detection of tumour-specific antigens at subsequent time points and comparing the results from the different time points. CD4 and/or CD8+ T-Cells isolated from the cancer patient may be treated with tumour-specific polypeptides, polypurcleotides encoding the polypeptides or antigen presenting cells each of the polypeptides. The cells are then administered to the patient to inhibit development of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 melanogaster. Lack of expression of the protein encoded by this gene leads to a lethal or semi-lethal phenotype. The inventition relates to 902 nucleic acid sequences from genes encoding proteins which are thought to be essential, and to a screening assay for identifying compounds which have a physiological effect on these proteins. Suitable compounds are useful as pesticides and may be used in conjunction with other pesticides and herbicides for crop
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           is located

from different sera by the PCR primers AAM66181-82). The specification describes HGV antigen clones isolated from PNF2161 sera. This sera is obtained from a patient suffering from Non-A Non-B Non-C Non-D Hopatitis Virus, also known as Hepatitis G virus (HGV). HGV antigens can be used in immunoreaction screening for presence of anti-HGV specific antibodies, especially in patient sera, e.g. enzyme linked immunossasy (FLISA). They can also be used as vaccines, and to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAV66231-66 represent the Hepatitis G virus (HGV) sequences, amplified

The specification describes HGV antigen clones isolated from PMT2161 sera. This sera is obtained from a patient suffering from Non-A Non-B Non-C Non-D Non-E Hepatitis Virus, also known as Hepatitis G virus (HGV). HGV antigens can be used in immunoreaction screening for presence of anti-HGV specific antibodies, especially in patient sera, e.g. enzyme linked immunoassay (ELISA). They can also be used as vaccines, and to raise the polyclonal and monoclonal antibodies.

AAV66231-66 represent the Hepallitis G virus (HGV) sequences, amplified from different sera by the PCR primers AAV66181-82). The specification describes HGV antigen clones isolated from PNF2161 sera. This sera is obtained from a patient suffering from Non-A Non-B Non-C Non-D Non-E Hepatitis Virus, also known as Hepatitis G virus (HGV). HGV antigens can be used in immunoreaction screening for presence of anti-HGV specific antibodies, especially in patient sera, e.g. enzyme linked immunoassay (ELISA). They can also be used as vaccines, and to raise the polyclonal and monoclonal antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Polypeptide antigens hepatitis G virus – useful as vaccines against the virus and raising antibodies for use in immuno-testing for the

                                                                                                                                                                                                                                                                                                 This sequence is a used in a method which detects Non-A, Non-B, Non-C, Non-D, Non-E hepatitis G virus (HGV) in a biological fluid sample, e.g. from a test subject, especially using a kit comprising an anti-HGV antibody preparation and a reporter for detecting binding of an HGV polypeptide antigen to the antibody, preferably where the antibody is monoclonal and/or is attached to a solid support and where the reporter is a labelled monoclonal antibody or a labelled competing antigen. The HGV is characterised by producing elevated serum alanine aminotransferase levels in an infected primate, being serologically distinct from hepatitis A, B, C, D and E viruses and having a viral genome containing a nucleic acid region that is selectively hybridisable with a polypeptide having 203 base pairs as given in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                          Antibody to hepatitis G virus protein - useful for diagnosis of hepatitis G virus infection

This sequence is a used in a method which detects Non-B, Non-B, Non-C, Non-E hepatitis G virus (HGV) in a biological fluid sample, e.g. from a test subject, especially using a kit comprising an anti-HGV antibody preparation and a reporter for detecting binding of an HGV polypeptide antigen to the antibody, preferably where the antibody is monoclonal and/or is attached to a solid support and where the reporter is a labelled monoclonal antibody or a labelled competing antigen. The HCV is characterised by producing elevated serum alanine aminotransferase levels in an infected primate, being serologically distinct from hepatitis A, B, C, D and E viruses and having a viral genome containing a nucleic acid region that is selectively hybridisable with a polypeptide having 203 base pairs as given in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Antibody to hepatitis G virus protein - useful for diagnosis of hepatitis G virus infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              0

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   202,
